

Company Profile

Olu Tee
Engineering Intl Ltd

About us

Olu Tee Engineering International Limited is an engineering firm incorporated in 2003 and is focused on rendering quality multidisciplinary engineering services which include; environmental services, civil and structural engineering, Engineering Procurement and Equipment leasing services.

We are equipped with a consortium of highly skilled and experienced professionals dedicated to innovation while delivering excellent services to our clients across several industries.

Our Vision

*To be the leading African service provider delivering **comprehensive, excellent and high-quality** services everywhere we operate*

Our Mission

To contribute to sustainable development by providing our clients with environmental management and engineering solutions that enhances their productivity and preserves the planet.

Professionalism

We are thorough and efficient, consistently deploying our expertise to give our customers cutting-edge services while continually inspiring confidence.

Professionalism

Innovation

Innovation

We set the pace, exploring creative means to encourage continuous innovation and provide superior value to all our stakeholders.

Core Values

Teamwork

Teamwork

We recognize that the sum total of the part is better than the individual parts. We enjoy working together to ensure that we deliver the optimal service to our customers and building naturally rewarding relationships

Agility

Agility

We are quick to respond to changes resulting from constantly evolving and incorporating best practices, standards and solutions while ensuring seamless service delivery

Our Services

Our services are grouped under four strategic business unit which includes the following:

- Environmental Services
- Civil and Structural Engineering
- Engineering, Procurement, Construction, Installation and Maintenance - **EPCIM**

Environmental Services

Environmental Services

Integrated Waste Management Services

We render waste management services through an Integrated system by employing standard waste management processes to satisfy our municipal and industrial clients.

Our Integrated waste management Facilities is equipped with State-of-the-art equipment to provide end to end waste management solutions.

Environmental Consulting Services

We support companies across various industries to achieve their Sustainability goals by providing strategic advisory on environmental challenges.

Our consulting portfolio include Environmental Impact assessment, Auditing and Reporting, Pollution control, Laboratory services, Renewable energy among many others.

Environmental Services

Waste Water Management Services

We provide quality waste water and effluent treatment to our clients across several industries.

We also help with effluent process designs and develop strategy for water reuse and sludge management.

Industrial Cleaning and Decontamination

We offer quality and environmental friendly industrial cleaning services to firms across different industries including

- Desludging and cleaning services for Storage tanks, Vessels, FPSO, etc.
- Pipeline and sewer cleaning

Olu Tee
Engineering Intl Ltd

Environmental Services

Engineered Land fill

Our Engineered Landfill solution is designed to protect the environment while disposing waste materials safely. Our solution can be effectively used to dispose municipal solid waste, contaminated soil and hazardous chemicals.

This solution is also designed to harness the landfill gas for power generation purposes.

Waste Management Technologies

We design and manufacture waste management equipment including Incinerators, Thermal Desorption Unit Shredders, Composting machine, etc.

We are partners with other leading Original Equipment Manufacturers in the waste management space, therefore enabling easy access to world class waste management technology for our clients.

Environmental Services

Recycling and Material Recovery

Recycling is a major cardinal point in effective waste management and also the key to sustainable environment.

We recycle plastics, glass, paper, metallic materials from different streams. We are also equipped with resource for special material recovery including Mercury recovery from Fluorescent bulb, Precious metal recovery from electronic waste, etc.

Civil and Structural Engineering

Civil and Structural Engineering

Structural Engineering Design

We provide structural design and analysis services for various kind of structures including buildings, factories, canals, flyovers, offshore structures for oil and gas installation.

Our design processes are technology driven. We use foremost technology solutions in ensuring effective cost, safety and sustainability of structures.

Urban Engineering

We offer design and construction services for municipal structures including water supply networks, sewers, street lighting and other urban infrastructures.

We have a number of completed projects in this respect; project with State and Federal government parastatals.

Civil and Structural Engineering

Water Resources Development and Management

We offer specialized services in the area of assessment, development, exploration and management of local and regional water resources; with experts in the Geodetics, Hydraulics, combating salt water intrusion and model simulation.

Transportation Engineering

We design, construct and maintain transportation infrastructures including roads, highways, ports, canals among others.

We believe adequate transportation systems would aid efficient and safe movement of people and goods resulting in a prosperous society.

Civil and Structural Engineering

Construction Administration Services

We provide construction administration and inspection services for government and private clients. We have a pool of well trained workmen and foremen driven with a passion for customer satisfaction.

We also have a quality assurance team that ensures compliance to the project design.

Real Estate Development Services

Being Environmental services specialists, we offer environmental friendly land development services including planning and detailed site design.

Engineering, Procurement, Installation, Construction and Maintenance - EPCIM

EPCIM

Engineering,
Procurement,
Construction,
Installation &
Maintenance

Construction and Installation Services

We render various construction and installation services for oil and gas companies including pipeline installation, onshore and offshore facilities, instrumentations and control systems, processing plants, front end engineering services, among others.

We also provide start-up services including manpower support for equipment.

Strategic Procurement Services

We provide procurement services for companies in various industries. We leverage on our partnership with both local and international technology providers to deliver quality technology procurement services. Our Procurement services feature global technology/material sourcing, quality assurance and quality control, supply chain management, and warehousing.

Our Commitment to Health, Safety and Environment

Health

We believe and understand the role of good health in increasing both the quality and productivity of employees. Hence, the health of our employees and clients are of great and cardinal interest.

Safety

Our staff are trained to observe and exercise due care and diligence at all times through exposure to standard safety procedures; whilst all unsafe acts are discouraged in work place through regular safety drills.

Environment

As practicing environmental professionals, we are ethically and morally bound to apply the best practicable environment-friendly means to preserve air, water, soil, plant and animal life from the adverse effects of our operations
